# Background

- Setup
  - Spatial resolution: 1504 × 1000
  - Angular resolution: 5 × 5
  - Exposure time: 20ms (total 500ms)

- Description
  - We show a subset of the light field captured with and without multiplexing.
  - Unlike dataset 1, this dataset is saved in JPEG compressed format, and the demultiplexing is applied after the camera response function is compensated.
